特点和用途 / Feature and applications

ZSN4系列直流电动机是我公司在Z4系列直流电动机的基础上，根据水泥回转窑主传动的工况特点，而开发的专用系列品种。

本系列电机采用八角形结构，定子空间利用率高。定子磁轭为叠片式，能承受脉动电流与电流急剧变化之工况，电机适应三相全控式整流电源，以及不外接直流平波电抗器而长期工作。新颖的F级绝缘结构，保证了绝缘性能稳定和散热良好。根据水泥回转窑的特定工况，进行设计制造，使电动机的起动力矩可达到额定力矩的2.5倍。采用管道通风的冷却方式，使电动机能在粉尘较大的恶劣环境中，安全可靠的运行。

ZSN4 series DC motor is designed based on Z4 series DC motor, it is exclusively used as main drive motor for cement rotary kiln.

This series of motors adopt octagon shape to take good use of inner space of motor. The motors have laminated yokes, which means that when used on rectifier power supplies they can endure both current ripple and rapid current changes (load change) under dynamic condition. The stator design leads to high accuracy of pole spacing and consequent good communication. The motors could be lastingly operated from fully controlled three phase bridge without a smoothing reactor, whose inductance is specified in the relevant technical data, should be inserted in the armature circuit to suppress ripple circuit. Motors are class F insulated, ensuring stable dielectric performance and excellent heat dissipation.

Designed exclusively according to special working conditions of cement rotary kiln, this series of motor could reach starting torque 2.5 times of rated torque. Adopting tube ventilation and cooling method, motors could be operated safely under bad circumstance full of dust and powder.
